## Product information - WMS WarehouseMaster

### WarehouseMaster: a total solution for your warehouse

WarehouseMaster is the comprehensive warehouse management system of TransportMaster.com B.V. This WMS is designed for logistic service providers, carriers, freight forwarders, shippers and every other enterprise with storage.

It is "public warehouse" software that fully integrates with your own financial software. It is user-friendly and has the possibility to add functionality by adding modules. Just like TransportMaster.

### Functionality

WarehouseMaster offers extensive standardized functionality for incoming, outgoing and transferring stocks and storage. As order-entry can be fully customized to meet your requirements, you can quickly enter orders for incoming, outgoing and transferring stocks and storage.

Keep an administration for dangerous goods, customs duties and a bonded warehouse. For warehouses handling dangerous goods there is a possibility to save information related to the ADR classification, e.g. the UN number.

You can enter batches and serial numbers and add information about containers or expiry date control.

- ✓ fully integrates with your own financial software
- ✓ user-friendly interface
- ✓ customizes to your needs
- ✓ supports your entire business

## Product information - WMS WarehouseMaster

### Products

Products are the base of all goods transactions. Therefore WarehouseMaster offers substantial functionality to register product related data. Purchase and selling price, size, volume, weight, unit of measure and much more.

The screenshot shows the 'WMS products' window with a list of products and their stock levels. A dialog box titled 'Setup Data Related unit' is open, showing the configuration for product EA-4062. The dialog includes fields for Code, Product Code, and Unit, and a table for defining related units.

Prev unit	Quantity	New unit	Total
1	1,000	EURO	
1	EURO	1,000	PIECES

### Units

Units of measure help you distinguish storage units from packaging units or pallet units. *Related units* is an important module of product functionality. You create your own relations with the units you have defined: 1 pallet is composed of 50 boxes, each box contains 10 products, etc.

✓ integration with mobile solutions for incoming stocks, order picking and cycle counting

✓ bonded warehouse

✓ customs duties

✓ dangerous goods

### Storage zones and stock locations

Create different storage zones in WarehouseMaster, each with their own stock locations. You can save these locations as "Quick Locations" for faster data-entry.

The image shows two screenshots of the 'Location generator' software interface. The left screenshot displays the input fields for creating a location, including Warehouse (SITE1), Description (Site1), Location type (Racking selected), and various location parameters. The right screenshot shows the output of the location generator, displaying 'Create locations: Location from: AB1, Location till: AB6, Total number of 6 locations' and a warning message.

*Use the location generator to quick and easy create your own stock locations.*

### Rates

Create detailed price agreements based on rates and storage units in WarehouseMaster. Per price agreement, you can fix a minimum and a maximum rate.

You can also register warehouse rent methods. You link these methods to price agreements. For each debtor, you can register one or more price agreements.

### Invoicing

Register additional trade units for a product, besides the default one. This means you can invoice handling activities for goods receipt based on euro pallets and for goods issue based on boxes.

As you wish to charge your customer for every handling activity you have performed, you can add warehouse invoice lines manually to new and to existing invoices. You can also automatically generate invoice lines when reserving or processing orders. And the periodically determined warehouse rent will also be added as a new invoice line to your invoice.

### A few WMS modules

- ✓ TMS integration
- ✓ Stock history (several years)
- ✓ Batch registration
- ✓ Product statuses
- ✓ Expiry date control
- ✓ Related units
- ✓ Wizard goods receipt
- ✓ Wizard goods issue (FIFO, LIFO)

There are several default overviews available in WarehouseMaster. With the Quick Filter tool you can quickly zoom in on details, e.g. products of a specific customer or of a specific location.

The stock history report shows the complete stock history and all the stock transactions. Several other default reports give you and your customers insight into stock transactions and the stock items presently into storage.

WarehouseMaster is an application that helps monitoring your operational activities. It is the perfect tool to support all of the logistic and financial activities of your company.
